## New title information

# Achieving sustainable cultivation of coffee

Edited by: Dr Philippe Lashermes, IRD, France

### Endorsement:

“Despite its popularity as a beverage and its economic importance, coffee has been considered as an orphan crop. This book on the recent advances in coffee research will help to meet the current challenges facing sustainable coffee production. It is edited by a senior IRD researcher (Dr P. Lashermes) with a long experience on coffee genetics. This book is the most up-to-date synthesis on major advances in coffee science, written by a large panel of researchers involved in international coffee research projects, in collaboration with the coffee industry worldwide. This book will be useful for scientists from universities, research institutes and industry in coffee-producing and coffee-consuming countries.”  
*Emeritus Professor Andre Charrier, Montpellier SupAgro, France*

### Description:

Coffee is one of the most widely traded commodities in the world. Coffee cultivation faces a number of challenges including over reliance on a relatively small number of varieties vulnerable to a range of abiotic and biotic stresses as well as increasing expectations of quality amongst consumers. These challenges are addressed by this volume.

Part 1 looks at advances in understanding plant physiology and ensuring genetic diversity. These provide the basis for summarising developments in breeding improved varieties of Arabica and Robusta coffee. The second part of the book reviews our understanding of the chemical composition, sensory properties and potential nutraceutical benefits of coffee.

With its distinguished editor and international range of expert authors, this volume will be a standard reference for coffee scientists, growers and processors.

### Key features:

- Covers recent research on coffee genetics, physiology and genetic diversity
- Reviews the latest developments in breeding new varieties
- Assesses advances in measuring and understanding the chemical composition, sensory and nutraceutical properties of coffee

### Audience:

Coffee scientists; coffee growers and processors; government and non-governmental agencies supporting coffee cultivation

### Editor details:

Dr Philippe Lashermes is a Researcher at the Institut de Recherche pour le Développement (IRD) and Associate Professor at the Université de Montpellier II, France. He was a member of the team that sequenced *Coffea canephora*, is Co-Cordinator of Working Group 3 (Genome Sequencing) of the International Coffee Genome Network (ICGN) and has published extensively on coffee genetics.

## Table of contents:

### Part 1 Plant physiology and breeding

1. Diversity and genome evolution in coffee: *Philippe Lashermes, IRD, France and Marie-Christine Combes, Université Montpellier, France*
2. Coffee tree growth and environmental acclimation: *Fabio M. DaMatta, Universidade Federal de Viçosa, Brazil*
3. Environmental and genetic effects on coffee seed biochemical composition and quality: *Thierry Joet and Stéphane Dussert, IRD, France*
4. Ensuring the genetic diversity of coffee: *Sarada Krishnan, Denver Botanic Gardens, USA*
5. Developing varieties of Arabica coffee: *Herbert A. M. van der Vossen, Association for Science and Information on Coffee (ASIC), The Netherlands*
6. Developing varieties of Robusta coffee: *Nayani Surya Prakash Rao, Central Coffee Research Institute, India*
7. Developments in molecular breeding techniques in Robusta coffee: *Alan Carvalho Andrade, EMBRAPA, Brazil*
8. Breeding caffeine-free coffee beans: *Chifumi Nagai, Hawaiian Agricultural Research Center, USA*
9. Disseminating improved coffee varieties for sustainable production: *Charles Lambot and Juan Carlos Herrera, Nestlé R&D Center, France*

### Part 2 Quality traits

10. Chemical composition of coffee beans: an overview: *Michael N. Clifford, University of Surrey, UK; Iziar A. Ludwig, Universitat de Lleida, Spain; Alan Crozier, University California, Davis, USA*
11. Bioactive compounds in coffee beans with beneficial health properties: *Ningjian Liang, Kaiwen Mu and David Kitts, University of British Columbia, Canada*
12. Beneficial compounds from coffee leaves: *Claudine Campa, UMR IPME, France; Arnaud Petitvallet, Wize Monkey, Canada*
13. Nutritional and health effects of coffee: *Adriana Farah, Universidade Federal do Rio de Janeiro, Brazil*
14. Advances in research on coffee flavour compounds: *Roberto Buffo, National University of Tucumán, Argentina*
15. Harmful compounds in coffee: *Noel Durand, CIRAD, France and Angélique Fontana, University of Montpellier, France*
16. Quality parameters and QA systems for coffee beans: *Mario Fernandez, Coffee Quality Institute, USA*
17. Methods for authentication of coffee: *Wiichiro Fukusaki, University of Osaka, Japan*
18. Life cycle analysis and the carbon footprint of coffee value chains: *Louis Bockel and Laure-Sophie Schiettecatte, Food and Agriculture Organization of the United Nations, Italy*
