

Achieving sustainable cultivation of temperate zone tree fruits and berries

VOLUMES 1 & 2

NEW!

Achieving sustainable cultivation of temperate zone tree fruits and berries - Volume 1

Physiology, genetics and cultivation

Edited by: Prof. Gregory A. Lang, Michigan State University, USA

KEY FEATURES

- Reviews latest research in tree fruit physiology
- Discusses latest developments in genetics and their implications for improved breeding techniques
- Comprehensive coverage of key stages in cultivation from nursery plants and orchard design to water, nutrient and pest management

CONTENTS

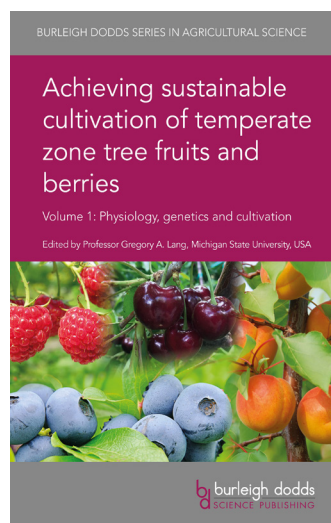

Part 1 Physiology and genetics

1. Advances in understanding fruit tree root–rhizosphere relationships for enhanced plant health: *Mark Mazzola and Shashika S. Hewavitharana, USDA-ARS, USA*
2. Advances in the development and utilization of rootstocks: a case study for apple *Gennaro Fazio, USDA-ARS Plant Genetics Resources Unit, USA; and Terence Robinson, Cornell University, USA*
3. Advances in understanding fruit tree growth: *Ted DeJong, University of California-Davis, USA*
4. Advances in understanding reproductive development in fruit-bearing plants: *Tomoya Esumi, Shimane University, Japan; and Ryutarō Tao, Kyoto University, Japan*
5. Advances in fruit genetics: *Ksenija Gasic and Christopher Saski, Clemson University, USA*

Part 2 Optimizing sustainable cultivation and quality

6. Optimizing production of quality nursery plants for fruit tree cultivation: *Stefano Musacchi, Washington State University and Tree Fruit Research and Extension Center, USA; and Davide Neri, Università Politecnica delle Marche, Italy*
7. Optimizing precision in orchard irrigation and nutrient management: *Denise Neilsen and Gerry Neilsen, Summerland Research and Development Centre, Agriculture and Agri-Food Canada, Canada*

8. Optimizing plant growth, yield and fruit quality with plant bioregulators: *Duane Greene, University of Massachusetts, USA*
9. Optimizing fruit production efficiencies through mechanization: *Manoj Karkee, Center for Precision and Automated Agricultural Systems, Washington State University, USA; Jacqueline Gordón, Washington State Tree Fruit Association, USA; Bernardita Sallto, Washington State University, USA; and Matthew Whiting, Center for Precision and Automated Agricultural Systems, Washington State University, USA*
10. Optimizing pest management in fruit cultivation: *Arthur Agnello, Cornell University, USA*
11. Optimizing disease management in fruit cultivation: *Sara M. Villani, North Carolina State University, USA; Kerik D. Cox, Cornell University, USA; and George W. Sundin, Michigan State University, USA*
12. Pre- and post-harvest strategies to optimize fruit quality and shelf-life: *Peter M. A. Toivonen, Agriculture and Agri-Food Canada, Canada*
13. Bioactive/nutraceutical compounds in fruit that optimize human health benefits: *Federica Blando and Miriana Durante, Institute of Sciences of Food Production (ISPA), Italy; and B. Dave Oomah, formerly Pacific Agri-Food Research Centre, Canada*

Editor biography

Dr Greg Lang is a Professor in Tree Fruit Physiology at Michigan State University, USA. He is the current Chair of the International Society for Horticultural Science (ISHS) Workgroup on Orchard Systems. Professor Lang has authored or co-authored more than 200 published papers and book chapters, edited numerous books and proceedings.

“This text, with its impressive line-up of world-renowned contributors, will provide an excellent resource of information about developments in temperate fruit production and about future prospects for further change towards greater sustainable production.”

Emeritus Professor Ian J. Warrington, Massey University, New Zealand

Achieving sustainable cultivation of temperate zone tree fruits and berries - Volume 2

Case studies

Edited by: Prof. Gregory A. Lang, Michigan State University, USA

KEY FEATURES

- Brings together some of the world's leading experts on the breeding and cultivation of particular fruits
- Comprehensive coverage of key stone, pome and berry fruits
- Reviews key advances across the value chain for particular crops that collectively optimise sustainable production

CONTENTS

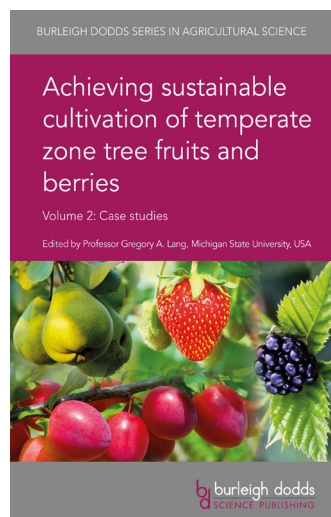

Part 1 Stone and pome fruits

1. Advances and challenges in peach breeding: *Dario J. Chavez and Rachel A. Itle, University of Georgia, USA; Daniel Mancero-Castillo, Universidad Agraria del Ecuador, Ecuador; Jose X. Chaparro, University of Florida, USA; and Thomas G. Beckman, USDA-ARS, USA*
2. Advances and challenges in sustainable peach production: *Luca Corelli Grappadelli, Brunella Morandi and Luigi Manfrini, University of Bologna, Italy; and Pasquale Losciale, University of Bari, Italy*
3. Advances and challenges in cherry breeding: *José Quero-García, INRA, University of Bordeaux, France; Amy Iezzoni, Michigan State University, USA; Gregario López-Ortega, IMIDA, Spain; Cameron Peace, Washington State University, USA; Mathieu Fouché and Elisabeth Dirlwanger, INRA, University of Bordeaux, France; and Mirko Schuster, Julius Kühn-Institut, Germany*
4. Sustainable sweet cherry cultivation: a case study for designing optimized orchard production systems: *Gregory A. Lang, Michigan State University, USA*
5. Challenges and opportunities in pear breeding: *Danielle Guzman and Amit Dhingra, Washington State University, USA*
6. Challenges and opportunities in pear cultivation: *Todd Einhorn, Michigan State University, USA*
7. Advances and challenges in apple breeding: *Amanda Karlström, NIAB EMR and University of Reading, UK; Magdalena Cobo Medina, NIAB EMR and University of Nottingham, UK; and Richard Harrison, NIAB EMR, UK*

8. Advances and challenges in sustainable apple cultivation: *Pierre-Éric Lauri and Sylvaine Simon, INRA, France*
9. Sustainable plum and apricot cultivation: *Mihai Botu, University of Craiova, Romania*

Part 2 Berry fruits

10. Advances and challenges in strawberry genetic improvement: *Chris Barbey and Kevin Folta, University of Florida, USA*
11. Strawberries: a case study of how evolving market expectations impact sustainability: *M. P. Pritts, Cornell University, USA; and T. M. Sjulín, formerly Driscoll Strawberry Associates, USA*
12. Advances and challenges in raspberry and blackberry breeding: *Ramón Molina-Bravo, Universidad Nacional de Costa Rica, Costa Rica; Margaret Leigh Worthington, University of Arkansas, USA; and Gina E. Fernandez, North Carolina State University, USA*
13. Advances and challenges in sustainable raspberry/blackberry cultivation: *Julie Graham, Alison Karley, Alison Dolan, Dominic Williams and Nikki Jennings, James Hutton Institute, UK*
14. Advances and challenges in blueberry breeding: *Susan McCallum, James Hutton Institute, UK*

Biblio information

Achieving sustainable cultivation of temperate zone tree fruits and berries - Volume 1

Physiology, genetics and cultivation

Pages 520
Pub. Date June 2019
Price £140/\$180/€170/C\$240

Achieving sustainable cultivation of temperate zone tree fruits and berries - Volume 2

Case studies

Pages 470
Pub. Date June 2019
Price £140/\$180/€170/C\$240

Ways to order

All our books are available in print and digital formats. Chapters are available in digital formats only. There are a variety of ways to purchase and gain access to the content.

Individual (print, e-books & e-chapters)

Via the website www.bdspublishing.com
Shop url: <https://shop.bdspublishing.com>

Burleigh Dodds Chapters Online

Via the website www.bdspublishing.com/chapters
