

BURLEIGH DODDS SERIES IN AGRICULTURAL SCIENCE

## Advances in breeding techniques for cereal crops

Edited by Professor Frank Ordon, Julius Kühn Institute, Germany  
Professor Wolfgang Friedt, Justus Liebig University Giessen, Germany

 burleigh dodds  
SCIENCE PUBLISHING

## AVAILABLE NOW

### About the book

This collection reviews key advances in cereals breeding. It looks at advances in exploiting genetic diversity, the use of doubled haploids and hybrid breeding. The book also reviews developments in phenotyping, the use of genetic markers and techniques such as genomic selection.

### About the editors

**Professor Frank Ordon** is President of the Julius Kühn Institute (JKI), the Federal Research Centre for Cultivated Plants in Germany.

**Professor Wolfgang Friedt** is Professor Emeritus of Plant Breeding at the Justus Liebig University of Giessen (Germany).

### Advances in breeding techniques for cereal crops

Available in print and digital formats:

ISBN - print 978-1-78676-244-3

Pages 612

Pub. Date June 2019

Price £190/\$245/€230/C\$325

Series No AS60

## Advances in breeding techniques for cereal crops

Edited by: Prof. Frank Ordon, Julius Kühn Institute (JKI), Germany and Prof. Wolfgang Friedt, Justus-Liebig University of Giessen, Germany

### Part 1 Exploiting genetic diversity

1. Alien introgression and breeding of synthetic wheat: *Wei Zhang and Xiwen Cai, North Dakota State University, USA*
2. Use of the secondary gene pool of barley in breeding improved varieties: *Matthew Haas, Leibniz Institute of Plant Genetics and Crop Plant Research (IPK), Germany; and Martin Mascher, Leibniz Institute of Plant Genetics and Crop Plant Research (IPK) and German Center for Integrative Biodiversity Research, Germany*
3. Marker-assisted trait introgression for wheat breeding & research: *Miguel Sanchez-Garcia, International Center for Agricultural Research in the Dry Areas (ICARDA), Morocco; and Alison Bentley, The John Bingham Laboratory, NIAB, UK*

### Part 2 Doubled haploids

4. Doubled haploid production in wheat: *W. Tadesse, M. Sanchez-Garcia, S. Tawkaz and M. Baum, International Center for Agricultural Research in the Dry Areas (ICARDA), Morocco*
5. Doubled haploid (DH) production for barley: *Benjamin Wittkop, Justus Liebig University Giessen, Germany; László Csélenyi, Saatzucht W. von Borries-Eckendorf, Germany*
6. Production of doubled haploid lines for hybrid breeding in maize: *Willem S. Molenaar and Albrecht E. Melchinger, University of Hohenheim, Germany*

### Part 3 Hybrid breeding

7. Prerequisites, procedures and potential of hybrid breeding in wheat: *Philipp H. G. Boeven and C. Friedrich H. Longin, University of Hohenheim, Germany*
8. Challenges and developments in hybrid breeding in barley: *Timm Bernhard, Wolfgang Friedt and Benjamin Wittkop, Justus Liebig University Giessen, Germany*
9. Selection strategies in hybrid rye with special consideration of fungal disease resistances: *Thomas Miedaner, University of Hohenheim, Germany; and Peer Wilde, KWS Lochow GmbH, Germany*

### Part 4 High throughput phenotyping, genetic markers and QTL mapping

10. Non-invasive field phenotyping of cereal development: *Andreas Hund, Lukas Kronenberg and Jonas Anderegg, ETH Zurich, Switzerland; Kang Yu, KU Leuven, Belgium; and Achim Walter, ETH Zurich, Switzerland*

11. Theory and application of phenotyping in wheat for different target environments: *Matthew Reynolds and Francisco Pinto, International Maize and Wheat Improvement Centre (CIMMYT), Mexico*
12. Development of single nucleotide polymorphism (SNP) markers for cereal breeding and crop research: current methods and future prospects: *Carly Schramm, Yuri Shavrukov and Peter Anderson, Flinders University, Australia; and Akhylbek Kurishbaev and Satyvaldy Jatayev, S. Seifullin Kazakh AgroTechnical University, Kazakhstan*
13. Mapping and isolation of major resistance genes in cereals: *Jan Bettgenhauser and Simon G. Krattinger, King Abdullah University of Science and Technology, Saudi Arabia*
14. Leveraging the QTLome to enhance climate change resilience in cereals: *Roberto Tuberosa, Marco Maccaferri and Silvio Salvi, University of Bologna, Italy*
15. Advances in statistical methods to handle large data sets for genome-wide association mapping in crop breeding: *Boby Mathew, University of Bonn, Germany; Mikko J. Sillanpää, University of Oulu, Finland; and Jens Léon, University of Bonn, Germany*
16. Nested association mapping in barley to identify extractable trait genes: *Andreas Maurer and Klaus Pillen, Martin-Luther-University Halle Wittenberg, Germany*

### Part 5 Genome-wide association studies and genomic selection

17. Genome-wide association studies (GWAS) in wheat: *Susanne Dreisigacker, International Maize and Wheat Improvement Center (CIMMYT), Mexico*
18. Genome-wide association studies (GWAS) in barley: *Ernesto Igartua, Carlos P. Cantalapiedra and Ana M. Casas, Consejo Superior de Investigaciones Científicas (CSIC), Spain*
19. Genomic prediction in cereals: advantages and drawbacks: *Patrick Thorwarth, University of Hohenheim, Germany*
20. Site-directed genome modification in barley and wheat: *Jochen Kumlehn, Stefan Hiekel and Nagaveni Budhagatapalli, Leibniz Institute of Plant Genetics and Crop Plant Research (IPK), Germany*
