

BURLEIGH DODDS SERIES IN AGRICULTURAL SCIENCE

NOW PUBLISHED!

About the book

This title features authoritative reviews of current research in all aspects of root science, including root growth regulators, root anatomy, nutrient acquisition and root system architecture. It discusses the responses of plant roots to abiotic and biotic stresses and how understanding nutrient uptake can be exploited to optimise root function.

About the editor

Dr Peter J. Gregory is Emeritus Professor of Global Food Security at the University of Reading, UK, where he was previously Professor of Soil Science. He is a former President of the International Society of Root Research (ISRR) as well as former Chief Executive of the Scottish Crop Research Institute (now part of the James Hutton Institute) and East Malling Research (now NIAB-EMR).

Understanding and improving crop root function

Available in print and digital formats:

ISBN - print	978-1-78676-360-0
Pages	686
Pub. Date	January 2021
Price	£180/\$235/€215/C\$305
Series No	AS90

Order via our online bookshop at <https://bdspublishing.com>, your usual book supplier, or pass to your librarian.

Understanding and improving crop root function

Edited by: Emeritus Professor Peter J. Gregory, University of Reading, UK

Part 1 Analysing root system architecture, growth and interactions with the rhizosphere

1. Advances in root architectural modeling: *Johannes A. Postma, Forschungszentrum Jülich, Germany; and Christopher K. Black, The Pennsylvania State University, USA*
2. The development of crop root architecture and optimization of nutrition acquisition: the case of rice: *Wei Xuan, Nanjing Agricultural University, China; Yuanming Xie, Nanjing Agricultural University, China and Ghent University and VIB-UGent Center for Plant Systems Biology, Belgium; and Tom Beeckman, Ghent University and VIB-UGent Center for Plant Systems Biology, Belgium*
3. Advances in understanding plant root growth regulators: *Findimila Dio Ishaya and Amanda Rasmussen, University of Nottingham, UK*
4. Advances in understanding plant root anatomy and nutrient acquisition: *Dimitris L. Bouranis and Styliani N. Chorianopoulou, Agricultural University of Athens, Greece*
5. Advances in understanding plant root hairs in relation to nutrient acquisition and crop root function: *Timothy S. George and Lawrie K. Brown, The James Hutton Institute, UK; and A. Glyn Bengough, University of Dundee, UK*
6. Understanding plant-root interactions with rhizobacteria to improve biological nitrogen fixation in crops: *Ulrike Mathesius, Australian National University, Australia; Jian Jin, La Trobe University, Australia and Chinese Academy of Sciences, China; et al.*
7. Advances in understanding arbuscular mycorrhizal fungal effects on soil nutrient cycling: *Haiyang Zhang and Jeff R. Powell, Western Sydney University, Australia*

Part 2 Root response to biotic threats

8. Advances in understanding plant root response to weedy root parasites: *M. Fernández-Aparicio and D. Rubiales, CSIC, Spain*
9. Advances in understanding plant root responses to root-feeding insects: *Scott N. Johnson, Hawkesbury Institute for the Environment – Western Sydney University, Australia; and Ximena Cibils-Stewart, Hawkesbury Institute for the Environment – Western Sydney University, Australia and Instituto Nacional de Investigación Agropecuaria (INIA), Uruguay*

10. Advances in understanding plant root response to nematode attack: *Shahid Siddique, University of California-Davis, USA; and John T. Jones, The James Hutton Institute and University of St Andrews, UK*

Part 3 Root uptake of nutrients and water

11. Advances in the understanding of nitrogen (N) uptake by plant roots: *Malcolm J. Hawkesford and William R. Whalley, Rothamsted Research, UK*
12. Advances in understanding plant root uptake of phosphorus: *Jiayin Pang, The University of Western Australia, Australia; Zhihui Wen, The University of Western Australia, Australia and China Agricultural University, China; et al.*
13. Advances in understanding plant root water uptake: *Mutez Ali Ahmed, University of Bayreuth, Germany; Doris Vetterlein, Helmholtz Centre for Environmental Research-UFZ, Germany; and Andrea Carminati, University of Bayreuth, Germany*

Part 4 Improving root function

14. Understanding and exploiting the genetics of plant root traits: *Roberto Tuberosa, Elisabetta Frascaroli, Marco Maccaferri and Silvio Salvi, University of Bologna, Italy*
15. The use of plant growth-promoting rhizobacteria (PGPR) to improve root function and crop nutrient use efficiency: *Melissa M. Larrabee and Louise M. Nelson, University of British Columbia, Canada*
16. The use of arbuscular mycorrhizal fungi to improve root function and nutrient-use efficiency: *Tom Thirkell, Grace Hoysted, Ashleigh Elliott and Katie Field, University of Leeds, UK; and Tim Daniell, University of Sheffield, UK*
17. Using systems agronomy to exploit deep roots in crops: *John Kirkegaard and Julianne Lilley, CSIRO Agriculture and Food, Australia*
18. Rootstocks to improve root function and resource-use efficiency: *Francisco Pérez-Alfocea, CEBAS-CSIC, Spain; Stephen Yeboah, CSIR-Crops Research Institute, Ghana; and Ian C. Dodd, Lancaster Environment Centre, UK*
19. Delivering improved phosphorus acquisition by root systems in pasture and arable crops: *Richard J. Simpson and Rebecca E. Haling, CSIRO Agriculture and Food, Australia; and Phillip Graham, Graham Advisory, Australia*
