

BURLEIGH DODDS SERIES IN AGRICULTURAL SCIENCE

Reducing greenhouse gas emissions from livestock production

Edited by Dr Richard Baines, Royal Agricultural University, UK

bd burleigh dodds
SCIENCE PUBLISHING

AVAILABLE NOW

About the book

This collection reviews measurement and modelling of methane emissions and current mitigation strategies, including improving breeding and health, manure management as well as the role of grassland and feed supplements.

About the editor

Dr Richard Baines is Senior Lecturer in International Rural Development and Agri-Food Systems at the internationally-renowned Royal Agricultural University in the UK. Dr Baines has worked with international bodies such as the FAO, national governments and NGOs on the environmental assessment and improvement of crop and livestock production.

Reducing greenhouse gas emissions from livestock production

Available in print and digital formats:

ISBN - print 978-1-78676-439-3

Pages 358

Pub. Date July 2021

Price £150/\$195/€180/C\$255

Series No AS95

Reducing greenhouse gas emissions from livestock production

Edited by: Dr Richard Baines, Royal Agricultural University, UK

Part 1 Analysis

1. Measuring methane emissions from livestock: *Trevor Coates, Agriculture and Agri-Food Canada, Canada; and Deli Chen and Mei Bai, University of Melbourne, Australia*
2. Greenhouse gas emissions from livestock production: modelling methods, methane emission factors and mitigation strategies: *Donal O'Brien, Environment, Soils and Land Use Department, Teagasc, Ireland; and Laurence Shalloo, Animal and Grassland Research and Innovation Department, Teagasc, Ireland*

Part 2 Breeding, animal husbandry and manure management

3. The contribution of animal breeding to reducing the environmental impact of livestock production: *Yvette de Haas, Wageningen University and Research, The Netherlands; Marco C. A. M. Bink, Hendrix Genetics Research, Technology & Services B.V., The Netherlands; Randy Borg, Cobb Europe B.V., The Netherlands; Erwin P. C. Koenen, CRV, The Netherlands; Lisanne M. G. Verschuren, Topigs Norsvin Research Center B.V./Wageningen University and Research, The Netherlands; and Herman Mollenhorst, Wageningen University and Research, The Netherlands*
4. Quantifying the contribution of livestock health issues to the environmental impact of their production systems: *Stephen G. Mackenzie, Trinity College Dublin, Ireland; and Ilias Kyriazakis, Queen's University of Belfast, UK*
5. Sustainable nitrogen management for housed livestock, manure storage and manure processing: *Barbara Amon, Leibniz Institute for Agricultural Engineering and Bioeconomy (ATB), Germany and University of Zielona Góra, Poland; Lars Stouman Jensen, University of Copenhagen, Denmark; Karin Groenestein, Wageningen Livestock Research, The Netherlands; and Mark Sutton, UK Centre for Ecology & Hydrology (UKCEH), UK*

6. Developments in anaerobic digestion to optimize the use of livestock manure: *Mingxue Gao, Danmeng Wang, Chunlan Mao, Yongzhong Feng, Zhiyuan Zhu, Xiaojiao Wang, Guangxin Ren and Gaihe Yang, Northwest A&F University, China*

Part 3 Nutrition

7. The impact of improving feed efficiency on the environmental impact of livestock production: *James K. Drackley, University of Illinois at Urbana-Champaign, USA; and Christopher K. Reynolds, University of Reading, UK*
8. Improving grassland/forage quality and management to reduce livestock greenhouse gas emissions: *Michael O'Donovan, Teagasc, Ireland*
9. The use of plant bioactive compounds to reduce greenhouse gas emissions from farmed ruminants: *Cécile Martin, Vincent Niderkorn, Gaëlle Maxin, INRAE, France; Jessie Guyader, INRAE-ADM NEOVIA, France; and Maguy Eugène and Diego P. Morgavi, INRAE, France*
10. The use of feed supplements to reduce livestock greenhouse gas emissions: direct-fed microbials: *Natasha Doyle, Teagasc Moorepark Food Research Centre, Ireland; Philiswa Mbandlwa, University College Cork, Ireland; Sinead Leahy and Graeme Attwood, AgResearch Limited, New Zealand; Bill Kelly, Ashhurst, New Zealand; Collin Hill and R. Paul Ross, Teagasc Moorepark Food Research Centre and University College Cork, Ireland; and Catherine Stanton, Teagasc Moorepark Food Research Centre, University College Cork and VISTAMILK SFI Centre – Teagasc, Ireland*
11. Modifying the rumen environment to reduce greenhouse gas emissions: *Yajing Ban, University of Alberta, Canada; André L. A. Neves, Embrapa Dairy Cattle, Brazilian Agricultural Research Corporation (Embrapa), Brazil; Le Luo Guan, University of Alberta, Canada; and Tim McAllister, Lethbridge Research and Development Centre, Agriculture and Agri-Food Canada, Canada*
