

BURLEIGH DODDS SERIES IN AGRICULTURAL SCIENCE

Plant genetic resources

A review of current research and future needs

Edited by Dr M. Ehsan Dulloo, Bioversity International, Italy

AVAILABLE NOW

About the book

The book assesses ways of valuing and monitoring plant genetic diversity and discusses advances in *in-situ* and *ex-situ* strategies for conserving plant genetic diversity. It concludes by reviewing ways of enhancing the use of plant genetic diversity, including participatory plant breeding programmes and more effective seed systems.

About the editor

Dr M. Ehsan Dulloo is Principal Scientist at the Alliance of Bioversity International and CIAT. He is also co-Leader of the Genetic Diversity Cluster in the CGIAR Research Program on Roots, Tubers and Bananas.

Plant genetic resources: A review of current research and future needs

Available in print and digital formats:

ISBN - print 978-1-78676-451-5

Pages 352

Pub. Date March 2021

Price £160/\$210/€190/C\$270

Series No AS100

Plant genetic resources: A review of current research and future needs

Edited by: Dr M. Ehsan Dullo, Bioversity International, Italy

Part 1 Importance and value of conservation and use of plant genetic diversity

1. Plant genetic resources for food and agriculture for sustainable development: *Chikelu Mba, Seeds and Plant Genetic Resources Team – Food and Agriculture Organization of the United Nations, Italy; M. Ehsan Dullo, Bioversity International, Italy; and Kent Nnadozie, Secretariat of the International Treaty on Plant Genetic Resources for Food and Agriculture – Food and Agriculture Organization of the United Nations, Italy*
2. Valuing plant genetic resources in genebanks: Past, present and future: *Melinda Smale, Michigan State University, USA; and Nelissa Jamora and Luigi Guarino, Global Crop Diversity Trust, Germany*
3. Monitoring plant genetic resources for food and agriculture: *M. Ehsan Dullo, Bioversity International, Italy; Prishnee Bissessur, Bioversity International, Mauritius; and Jai Rana, Bioversity International, India*
4. Improving the global exchange of germplasm for crop breeding: *Selim Louafi, UMR AGAP Institut, CIRAD, University of Montpellier, INRAE, Institut Agro, Montpellier, France; and Eric Welch, Arizona State University, USA*

Part 2 Protecting plant genetic diversity: in-situ and on-farm strategies

5. Key steps in conservation and use of plant genetic resources: an overview: *Nigel Maxted and Joana Magos Brehm, University of Birmingham, UK*
6. Key issues facing genebanks in preserving crop genetic diversity ex situ: overview of the range of challenges: *Paula Bramel, formerly Crop Trust, Germany*

7. Techniques and key issues in collecting crop wild relatives: *Michael Way, Royal Botanic Gardens, Kew, UK*
8. New technologies to improve the ex situ conservation of plant genetic resources: *Fiona R. Hay, Aarhus University, Denmark; and Sershen, University of the Western Cape & Institute of Natural Resources, South Africa*
9. The role of the Svalbard Global Seed Vault in preserving crop genetic diversity: *Åsmund Asdal, Nordic Genetic Resource Centre (NordGen), Sweden*

Part 3 Enhancing conservation and use of plant genetic diversity

10. Community-based conservation of crop genetic resources: *Stef de Haan, International Potato Center (CIP), Peru*
11. Participatory plant breeding programs to optimize use of crop genetic resources: *Margaret Smith, Cornell University, USA; and J. C. Dawson, University of Wisconsin-Madison, USA*
12. Seed systems and diversity: *Niels Louwaars, Plantum and Wageningen University, Law Group, The Netherlands*
13. DNA-based screening of Brassica germplasm for sustainable and enhanced crop production: *Yueqi Zhang, The University of Western Australia, Australia; Ting Xiang Neik, Sunway College Kuala Lumpur, Malaysia; and Junrey C. Amas, Aldrin Y. Cantila, Nur Shuhadah Mohd Saad, Tingting Wu and Jacqueline Batley, The University of Western Australia, Australia*
