

BURLEIGH DODDS SERIES IN AGRICULTURAL SCIENCE

Water management for sustainable agriculture

Edited by Professor Theib Oweis
International Center for Agricultural Research
in the Dry Areas (ICARDA), Jordan

bd burleigh dodds
SCIENCE PUBLISHING

NOW AVAILABLE

About the book

There is increasing competition for water resources with declining aquifer reserves and lower rainfall in some areas due to climate change. This volume reviews research into topics such as more sustainable use of groundwater, more efficient irrigation techniques and water management.

About the editor

Professor Theib Oweis is Director of the Water, Land and Ecosystems Program (WLEP) at the International Centre for Agricultural Research in the Dry Areas (ICARDA). He is a jointly appointed Distinguished Professor - International Platform for Dryland Research and Education at Tottori University, Japan. Professor Oweis is widely regarded as one of the world's leading authorities on water management in agriculture.

Water management for sustainable agriculture

Available in print and digital formats:

ISBN - print 978-1-78676-176-7

Pages 612

Pub. Date July 2018

Price £230/\$300/€275/C\$390

Series No AS45

Order via our online bookshop at www.bdspublishing.com, your usual book supplier, or pass to your librarian.

Water management for sustainable agriculture

Edited by: Theib Oweis, International Centre for Agricultural Research in the Dry Areas (ICARDA), Jordan

Part 1 Fundamentals

1. Understanding and measuring plant water use: *Gretchen R. Miller, Texas A&M University, USA*
2. Dynamics of water storage and retention in soil: *K. Rajkai, Hungarian Academy of Sciences, Hungary; F. Ács, Eötvös Loránd University, Hungary; B. Tóth, Hungarian Academy of Sciences and University of Pannonia, Hungary; and A. Makó, Hungarian Academy of Sciences, Hungary*
3. Climate change and water resources for agriculture: *Luis Garrote, Universidad Politécnica de Madrid, Spain*

Part 2 Sustainable use of groundwater and surface water for irrigation

4. An integrated approach for the estimation of crop water requirements based on soil, plant and atmospheric measurements: *N. Jovanovic, S. Dzikić and M. Gush, Council for Scientific and Industrial Research (CSIR), South Africa*
5. The economics of groundwater development and governance: *T. Shah, International Water Management Institute (IWMI), India*
6. Managing surface water for irrigation: *A. Qureshi, International Center for Biosaline Agriculture, United Arab Emirates*

Part 3 Other sources of water for irrigation

7. Rainwater and floodwater harvesting for crop irrigation: *Dieter Prinz, Karlsruhe Institute of Technology (KIT), Germany*
8. The use of treated wastewater for crop irrigation: *Alfieri Pollice and Ramy Saliba, IRSA-CNR, Italy; and Antonio Lonigro, Università degli Studi di Bari, Italy*
9. Use of brackish and marginal water for irrigation in water-scarce areas: *Z. Gao, China Institute of Water Resources and Hydropower Research, China*

Part 4 Irrigation techniques

10. Developments in surface irrigation techniques: *Taffa Tulu, Addis Ababa University, Ethiopia*
11. Trickle irrigation systems: *Megh R. Goyal, formerly University of Puerto Rico, Puerto Rico*
12. An overview of subsurface irrigation techniques: *Andrea Dührkoop and*

Oliver Hensel, University of Kassel, Germany

13. Fertigation techniques for efficient water and nutrient use in agriculture: *Munir J. Mohammad Rusan, Jordan University of Science and Technology, Jordan and International Plant Nutrition Institute (IPNI), USA*

Part 5 Managing water use on the farm

14. Modelling water use on farms: *L. S. Pereira and P. Paredes, University of Lisbon, Portugal*
15. Improving water productivity in rainfed agriculture: challenges and opportunities for small-scale farmers in dry lands: *John Gowing, University of Newcastle, UK*
16. Improving water use in tropical rain-fed systems: the situation in India: *Suhas P. Wani, Kaushal K. Garg, Girish Chander and K.H. Anantha, International Crops Research Institute for the Semi-Arid Tropics (ICRISAT), India*
17. Deficit irrigation and site-specific irrigation scheduling techniques to minimize water use: *Susan A. O'Shaughnessy, USDA-ARS, USA; and Manuel A. Andrade, Oak Ridge Institute for Science and Education, USA*
18. Drainage systems to support sustainable water use: *Henk Ritzema, Wageningen University, The Netherlands*

Part 6 Managing water resources

19. Increasing water productivity in agriculture: an overview: *Wayne S. Meyer, University of Adelaide, Australia*
20. Regional strategies in sustainable water management for irrigation: the eco-efficiency approach: *Mladen Todorović, Centre International de Hautes Etudes Méditerranéennes (CIHEAM), Mediterranean Agronomic Institute of Bari, Italy*
21. The challenge of sustainable water resources management under water scarcity: *Pasquale Steduto, Food and Agriculture Organization of the United Nations (FAO), Italy; and Chris Perry, Former Research Director, International Water Management Institute (IWMI), UK*
22. Assessing the cost of supplying water for agriculture: the food supply cost curve: *Roberto Roson, Ca' Foscari University of Venice, Italy*
